DETAILED ACTION

Claims 3-6 are pending in this application. The preliminary amendment dated 3/6/02 canceling claims 1-2 has been entered.

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

It is noted that the claimed invention is directed solely to a method. The examiner suggests amending the title to reflect same.

Claim Rejections - 35 USC § 112

Claims 3-6 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

In claim 3, the term “under conditions” is nonenabling as there is not teaching or guidance to enable one skilled in the art to obtain a given distribution.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 1762

In claim 3, the term "high quality" is a relative term which renders the claim indefinite. The term "high" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. The same issue applies to claims 4 and 6. In addition, the same issue applies to the term "few" in line 3.

In claim 3 line 3, the term "under conditions" is confusing as to what those conditions are.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Kitabatake et al. (5,328,855) or Geis (5,670,788). Kitabatake discloses a method of forming a semiconductor diamond (col.1 lines 7-13) by ion implantation (col.2 lines 3-14). The ion energy is greater than 50 eV (lines 52-53).

Geis discloses a method of forming a diamond cold cathode by ion implantation of diamond (claim 22) in which the ion implantation energy is greater than 50 keV (col.3 lines 28-46). However, the reference fails to teach the claimed energy range.

It is noted that the cited references clearly teach overlapping ranges. Overlapping ranges are *prima facie* evidence of obviousness. It would have been obvious to one having ordinary

skill in the art to have selected the portion of the prior art reference's range that corresponds to the claimed range

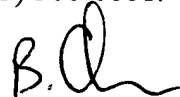

The limitations of claims 4-6 have been addressed above.

Kuchеров et al. (5,653,800), Oishi et al. (6,376,276), Heera et al. (6,281,037), and Zeisse et al. (H1287) have been provided for additional information.
